

How to Upload Photos from iPhone to Computer in Windows 8

If you have a PC with an older version of Windows, Auto Play will pop up when your iPhone is connected to your computer with a USB cable. On a PC with Windows 8, your computer will detect the device and provide a pop-up that says "Tap to choose what happens to this device." When you click on that pop-up, you'll see the Import Photos and Videos option to allow you to move photos and videos from iPhone to PC. The rest of the process should be pretty similar to what is demonstrated below for Windows 10. When in doubt, look for the Import button!

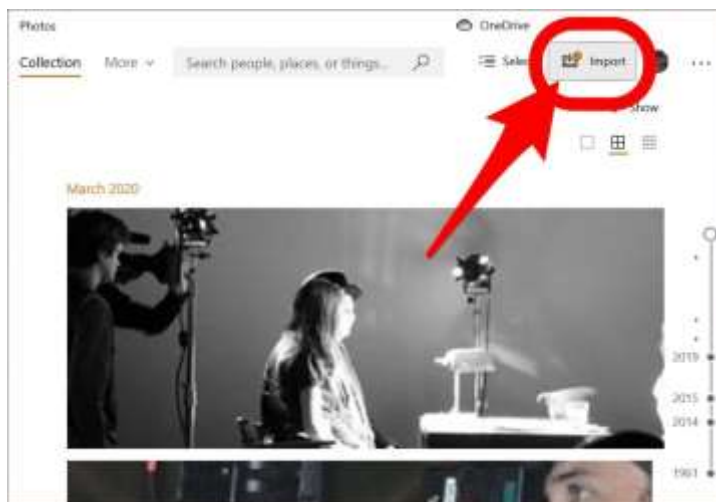

How to Import Photos from iPhone to PC in Windows 10

Below we'll show you how to transfer selected photos from iPhone to PC, or all photos.

Plug your iPhone into your Windows computer with the USB cable.

1. Plug your iPhone into your Windows computer with the USB cable.
2. On your iPhone, a pop-up will ask if you would like to allow the computer to access the iPhone. Tap **Allow**.
3. On your Windows computer, the **Photos** application may automatically launch. If it doesn't, launch the Photos program using the Windows Start menu or search bar.
4. Click the **Import** button in the upper-right corner of the Photos app.

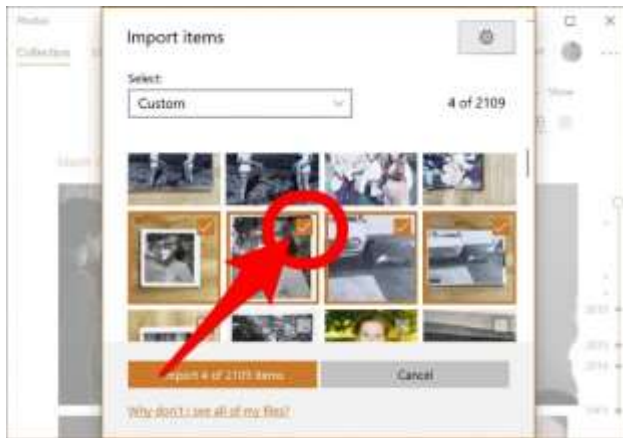

5. In the drop-down menu, select **From a USB device**.

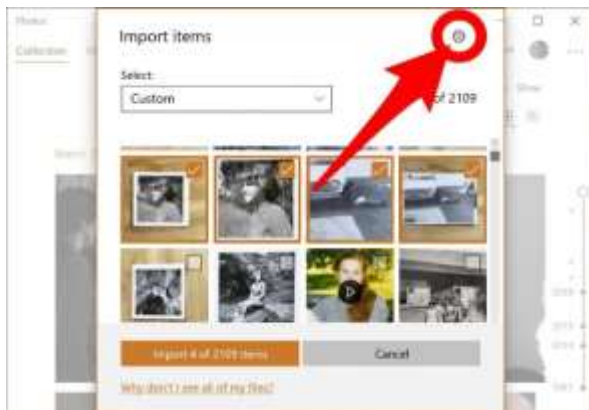

6. If you have multiple USB devices plugged in to your PC, such as a thumb drive, you'll be asked to select which one you want to import from. Select your iPhone.
7. The computer will search for photos to import, then a box with the new photos for transfer will pop-up. If the Photos application crashes here, you may have a common bug. Try the alternate method listed in the next section.

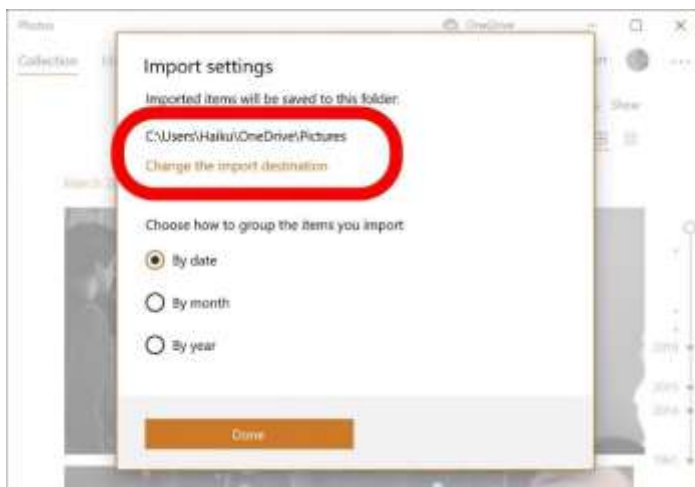

8. Select the photos you want to import.

9. To see where the photos will be saved and to change that location, click **settings**, represented by a gear icon.

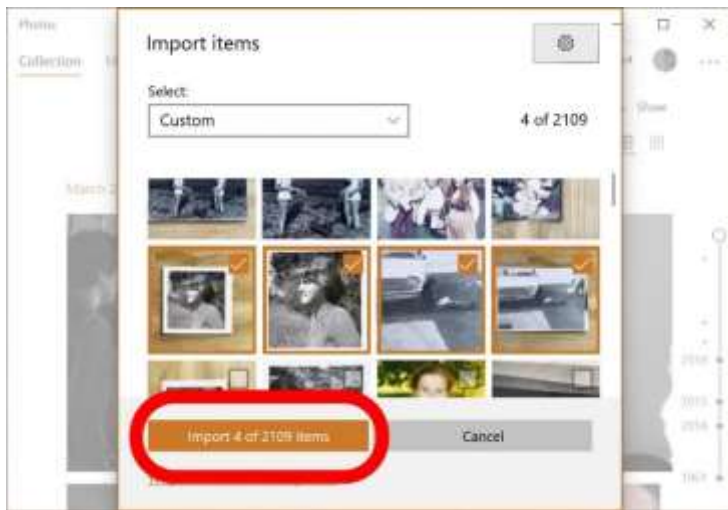

10. In the import settings menu, you will see the location where the photos will be saved plus a **Change the import destination** link in case you want to change where imported iPhone photos are saved to your PC.

11. Click **Done** to go back to the image-selection screen.

12. Once you've selected the images you want, click the **Import** button.

13. Once they're imported, you can view the photos in the Collections menu of the Photos app or select the Album icon on the left sidebar to view specific albums.
